

order-deploy.yaml

- ye pod banane ke lie image chahiye
- frontend ka multi-stage dockerfile banaenge
- push dockerfile to github in feature branch
- auto pipeline run for 1. scanning (blackduck, code quality, sonarqube, etc)
2. Build Image and tag image and push to ACR
3. Prisma and trivy scanning of docker image

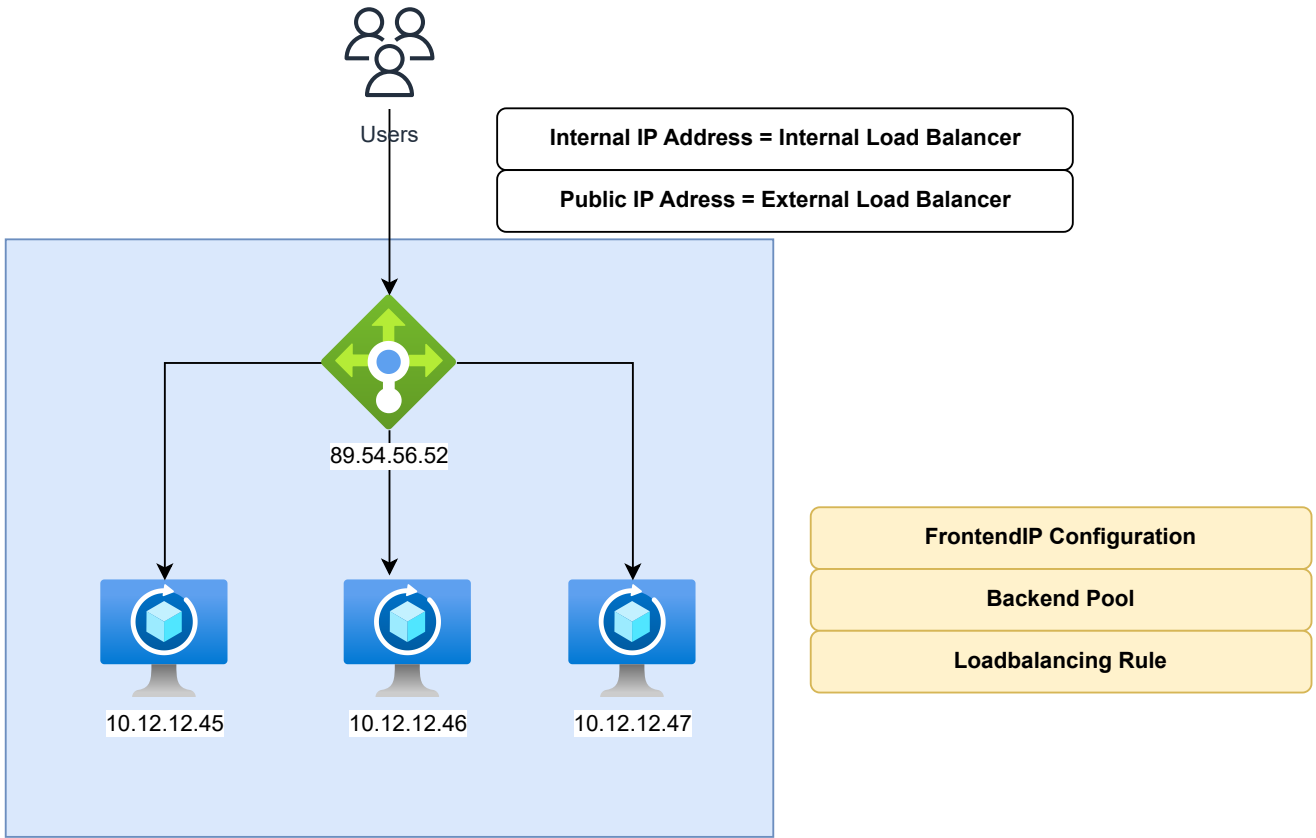

Backend ke lie bhi ye sb kuch krna pdega

frontend-deploy.yaml

user-deploy.yaml

http://20.246.213.163:8080/
Sb try krke dekho ek baar

- Cluster IP - Internal Loadbalancing and Communication
- Loadbalancer - For sandbox environment
- NodePort - Testing and limited external access
- Ingress Controller - TLS, WAF, multiapp

Homework:

<https://github.com/manuel-valles/microservices-node>

Sabka docker image banana hai... clone krke ya azure ke vm pr..

docker hub pr account bana ke image push kr na hai

Write deployment.yaml, service.yaml, type loadbalancer
