

Infra Creation using Automation (Terraform and Bicep)

Login to Cluster

Application: Axion System and below repo

<https://github.com/manuel-valles/microservices-node>

MonoRepo: Ek repo me sb microservice

CICD issues, Access Management Issues

MultiRepo/PolyRepo: Alg alg repo me alg alg code

<https://github.com/devopsinsiders/axion-ui>

<https://github.com/devopsinsiders/axion-telemetry-query-service>

<https://github.com/devopsinsiders/axion-ingestion-service>

<https://github.com/devopsinsiders/axion-data-simulator>

<https://github.com/devopsinsiders/axion-database-schema>

Access the existing application repo, we will see how to build it manually.

application ko local pr lao and build krke chala ke dekho..

Sare command ko list down krna hai aur multistage stage docker file me daldo

Build the Multistage Dockerfile to create DockerImage

Local pr container chala kr test krke dekhenge docker desktop pr ya linux vm me docker dalke

Postman se Hit marke API test kr skte..

Sb Dockerfile and code push kr dia gitflow branching strategy se...
First code push in feature branch.. Automatic PR pipeline will be triggered, scans, code quality using sonarqube, checkmarx, blackduck, prisma, etc...
If reports are good, the raise PR, review PR and merge to develop branch..

From develop branch, again scan will take place then once everything looks good, image will be built and pushed to ACR/github package/private docker hub with a new tag.

Need to create Manifest files.

Create namespace app-dev, for this namespace.yaml is created.

Create deployment.yaml, service.yaml

Enable AGIC, Create ingress.yaml for every application

Create configmap.yaml, secret.yaml, secretproviderclass.yaml

Create pv.yaml, pvc.yaml, hpa.yaml, pdb.yaml, networkpolicy.yaml

Liveness probe, readiness probe etc... resource, and limit, pod antiaffinity, node affinity, taint and tolerations

Helm Chart - values-dev.yaml, values-qa.yaml etc..

Helm ke through Argocd dal denge, and will connect to github

Network Policies, Image Pull Secrets

Now we are doing POC's on Argentic AI.
