

Kubernetes Syllabus
Kubernetes Basic Introduction
Kubernetes = Container Orchestration Tool
Architecture of Kubernetes
Smallest Unit in K8s = Pod
Pod = Maa of containers
Namespace
Logical separate places for kubernetes objects
Kubernetes Networking
Kubernetes Services - ClusterIP, NodePort, Loadbalancer
NetworkPolicy to block traffic between pods
Ingress Controllers for K8s
Gateway API for K8s
Controllers in K8s(pod ki maa) - ReplicaSet, Deployment, StatefulSet, DaemonSet
Storage in Kubernetes
Volumes, Persistent Volumes and Persistent Volume Claims
Pod are ephemeral
Configmaps and secrets, Secret provider Class
Helm Packaging Tool
Prometheus/Grafana , Grafana Loki, Promtail, Pixie, New Relic, Datadog
Service Mesh istio
Custom CRD in Go Lang
Kubernetes best practices
Side Container and Init Containers
Upgrade Clusters, Gatekeeper(OPA)
Kubernetes Dashboard
CI - GitHub Actions, SonarQube, Prisma, Trivy
CD - ArgoCD(GitOps)
MLOps
GCP
AWS
Kubernetes AI Agent + troubleshooting

- Microservices application ko deploy karna hai kubernetes cluster p...
- Click click karke kaise kubernetes kharid te hai..
- How to access kubernetes
- isme resource object kaise banana hai..
- HomeWork - How to create AKS using Terraform
- Rg, acr, and aks
