

Kubernetes banate samay networking models kya kya hai?
Kaise pod ko ip milta hai?
Ek pod ke andar 1 container hai toh us container ka alg ip hoga?
Ek pod ke andar me do container chalana hai, ek nginx and firefox aur dono chl jaega dono ko test
Do pod ke bich me communication hoga vo dekhenge
Do pod same node, Do pod in different node?
Jenkins pod and port forward

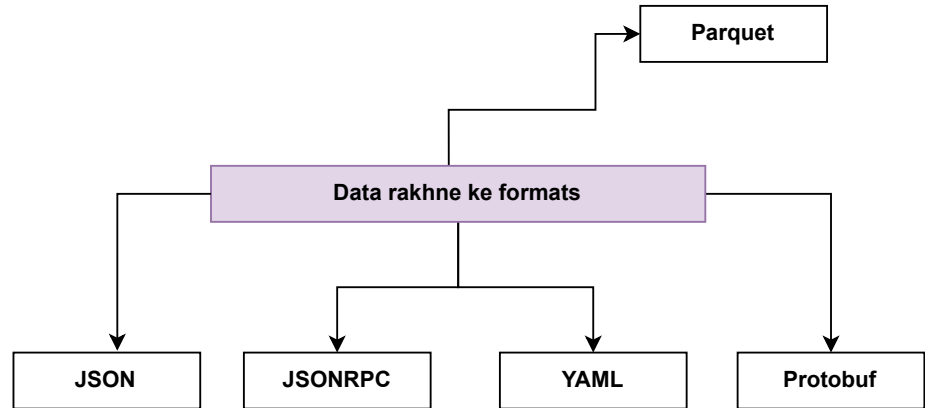

Terraform	Kubernetes
.tf extention me	.yaml extention ko use karke
HCL Language use hoti thi	Simple YAML use hoti hai
Block ke format me hoti thi	?
terraform apply	kubectl apply

Map - multiple rg ki, vnet ki, subnet ki details ko store karte the
Map - Bahut sare key = value milenge toh map banega
key = value
key = value

Multiple Boyfriends
<pre>bf1 = { name = chindi age = 56 ameer = yes isBlocked = false features = ["pushbuttonstart", "alloywheels"] } bf2 = { name = dildaar age = 35 isBlocked = true ameer = no features = ["sunroof", "adas"] }</pre>
String, List, Bool

Data rakhne ke formats uske kuch rules hote hai

YAML Rules
Rule1- key: value
name: aman
city: indore
role: joru_ka_gulam
Rule2- Indendation(relationship)
Space hi sab kuch hai

```
person:
  name: aman
  city: indore
  role: joru_ka_gulaam
```

Rule3 - Nested Structure
home: owner: tinku room: colour: blue size: 200 sqft
Rule4 - List
vegetables: - aloo - bhindi - pyaj

Rule5 - List of ojects
persons: - name: aman role: bhaiya - name: ashish sir role: padana

Jab bhi kahi List/Array dikhega jo chokor dabbe jaisa hota hai, tb YAML me hyphen (-) aaega

: COLON
- HYPHEN
_ UNDERSCORE
